

Summary

Python developer with hands-on experience building AI-powered applications using LLMs, RAG pipelines, and REST APIs. Designed backend workflows and automation systems using Python, FastAPI, and LangChain. Focused on building practical, production-ready AI applications and currently seeking an opportunity in AI application development roles.

Experiences

AI Application Developer **Nov 2025 - Present**
RS Technologies **USA**

- Integrated **OpenAI and Claude APIs** into **Python applications** to automate content workflows, reducing manual processing effort and improving response turnaround time for internal teams.
- Built backend workflows using **Python** and **FastAPI** for prompt handling, response parsing, and document processing, improving consistency of AI features during testing.
- Developed preprocessing scripts to clean and organize input data before model execution, saving approximately **3–4 hours** of manual formatting work per week.

Python Developer **Jan 2025 - Oct 2025**
Abhi IT Solutions **USA**

- Developed **Python backend modules** and reusable scripts for internal applications, reducing duplicate code and improving development speed for new features.
- Automated **data validation and processing tasks** using **Pandas**, reducing manual effort and improving processing time for large datasets by around **30%**.
- Refactored existing Python code and added **unit tests** to catch edge-case issues earlier, reducing post-release bug fixes and improving application stability.

Systems Engineer **Oct 2021 - Nov 2022**
Infosys **India**

- Wrote **Bash scripts** to automate deployment and environment setup tasks, reducing manual release effort and saving several hours during deployment cycles.
- Collaborated with development teams to troubleshoot **environment and configuration issues**, helping reduce delays during sprint delivery timelines.

Projects

Document Q&A Assistant – RAG System

- Built a **RAG-based Q&A tool** using **Claude API and FastAPI/AWS**, enabling users to upload PDFs and receive **accurate, sourced answers in under 2 seconds**.

MoodBot – AI Mood Lifting Chatbot

- Built a stateful AI chatbot using Google Gemini API with **real-time mood detection**, automatically adjusting responses based on emotional context (sad, angry, energetic), with **secure API key management** and **automated chat logging**.

AI Job Application Assistant

- Built an **AI-powered job application assistant** using **Python and Google Gemini** API to compare resumes against job descriptions and **generate ATS-focused** keyword and improvement suggestions.

Education

M.S. in Computer Science **Feb 2023 - Nov 2024 Concordia University** **Wisconsin, USA**

Skills

Technical Skills: Python, LangChain, RAG, Bash, Claude API, OpenAI API, Prompt Engineering, Pandas, AWS (EC2, S3, Lambda, RDS, IAM, VPC, CloudWatch), Boto3, FastAPI, Flask

Tools : Docker, Kubernetes, Terraform, Ansible, Jenkins, GitHub Actions, Git
